PROFESSIONAL SUMMARY

Full-stack engineer with 11+ years delivering production systems in financial services and waste-management technology, with hands-on ownership of distributed service architecture, event-driven integrations, infrastructure-as-code, security hardening, and observability across React, Vue.js, TypeScript, Django/FastAPI, NestJS, and Rails stacks. Currently leading technical initiatives across cross-functional teams.

TECHNICAL SKILLS

Languages	Ruby, Python, JavaScript, TypeScript, Golang, Java, HTML, CSS
Frameworks	Vue.js, React, Next.js, Remix, Django, Django REST Framework, FastAPI, NestJS, Rails, Spring
Databases	PostgreSQL, MySQL, MongoDB
Tools	Docker, Git, Terraform/Terragrunt, AWS (ECS Fargate, SNS, SQS, EventBridge, EC2, S3), GitHub Actions, Redis, Kafka, Keycloak (OAuth2/OIDC), Apereo CAS, GraphQL (Apollo), Redux, TanStack Query, Storybook, Cypress, OpenTelemetry (Coralogix), Sentry
Spoken	English — B2 Upper-Intermediate · Portuguese — Native

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Musa | Waste Management Technology Company | July 2026 to Present

- Developed and deployed a dispute resolution service using Python, Django REST Framework, and PostgreSQL, replacing email and WhatsApp exchanges with an auditable workflow. Integrated operations and billing through SNS, SQS, and the outbox pattern to apply approved corrections and prevent duplicate charges.
- Delivered the billing cycle release feature end to end, integrating five services using FastAPI, NestJS, Apollo GraphQL, and React, with configurable retention rules, automatic holds, and measurement approval.
- Provisioned development, staging, and production environments on Amazon ECS with AWS Fargate using Terraform and Terragrunt, including Sentry monitoring and service health checks.
- Implemented mandatory test validation for pull requests and fixed report generation in the shared GitHub Actions library used by all company services.
- Migrated authentication between services to OAuth2 service accounts in Keycloak, resolving authorization failures caused by forwarding user tokens and reducing exposure of those credentials.
- Authored the RFC and technical specification for the dispute domain and contributed to an internal AI agent pipeline, exposed through an MCP server, to generate implementations from validated specifications.

Full-Stack Developer

VERT Capital | Financial Services Company | May 2021 – May 2026

- Led migration of a monolithic Django/Vue.js application to an independent Vue.js SPA, reducing deployment time by over 40% and improving maintainability.
- Hardened authentication by migrating from browser-accessible tokens to HttpOnly cookie-based sessions with CAS SSO integration, reducing client-side token exposure.
- Built a Design System with Storybook in partnership with UX, improving component reuse and streamlining the design-to-development workflow.
- Structured distroless-style Docker images for production and development, improving runtime security and reducing local resource consumption.
- Implemented OpenTelemetry-based telemetry pipelines with Coralogix for production monitoring and incident analysis.
- Worked across the full stack delivering features in React, Next.js, and Remix on the front end and Django/Python and Go on the back end, owning the complete request lifecycle from API design to UI implementation.

Front-End Developer

Hyperspace | Software Development Company | February 2020 – May 2021

- Developed and maintained a Vue.js platform for financial document issuance, process management, and operational workflows — the core system later carried into VERT Capital post-acquisition.
- Led front-end continuity through the Hyperspace acquisition by VERT Capital, standardizing Vue.js development practices and ensuring zero regression on the core operational platform during organizational integration.

Full-stack Developer

Ivory IT | Software Development Company | August 2018 – December 2019

- Led front-end development of a vehicle flow management system for VLI Logistics (SIOP) using React and Redux, introducing the stack to the team with ongoing mentorship and training.
- Delivered back-end features for multinational clients including CNI and SESI, and integrated GraphQL APIs on the front-end across multiple concurrent projects.

Web Developer Intern

Nerit | Political and Aesthetic Clinic Management Solutions | September 2017 – April 2018

- Maintained and extended a CMS in PHP/CodeIgniter and Java (Spring), covering bug fixes, feature development, and system optimization.
- Supported migration from monolith to web services architecture and contributed to a new React project, working full-stack across the stack.

Web Developer Intern

Primore Agency | Digital Marketing and Website Development Agency | June 2015 – June 2017

- Built and maintained on-demand websites for marketing and institutional clients using Ruby on Rails, MySQL, and jQuery.

- Owned QA, deployment, and post-release support for client websites across a portfolio of marketing and institutional projects, reducing release issues through structured testing before each delivery.

EDUCATION

- Bachelor's Degree in Information Systems, FUMEC University, 2021
